

**SYSTEM AND METHOD FOR SERVER DISPLAY CONFIRMATION RECORD  
RESPONSE IN A CONNECTION ORIENTED CLIENT/SERVER PROTOCOL**

**Abstract of the Disclosure**

5           A system and method for operating a Telnet client to  
establish a network connection with a Telnet server.  
Environment parameters are negotiated for establishing a  
connection-oriented connection of the client to the server,  
the parameters optionally including a request for the server  
10       to provide a custom confirmation record. Responsive to that  
request, the server provides a custom confirmation record to  
the client selectively including default or defined custom  
information generated according to a customer provided exit  
program.
